7 mm Rem. Mag.

The 7 mm Rem. Mag. was introduced in 1962. It belongs to the family of the so-called magnum cartridges. This calibre is suitable for repeating rifles with standard systems. Until today, hunters have used this calibre in Europe, what is to be attributed to a more extended trajectory and consequently higher velocities as opposed to the 7 x 64.

GECO followed this trend with the introduction of the 165 gr SOFTPOINT bullet in 1995. Presently, the assortment comprises moreover the loads GECO EXPRESS with 155 gr bullets and GECO Plus with a weight of 170 gr. For all hunters preferring lead-free ammunition, we offer the GECO ZERO with a weight of 127 gr.

GECO Plus

The GECO Plus is a precise projectile designed using the latest technology. The GECO bonding technique is characterised by the extremely strong solder joint between the projectile core and jacket. As a result of this the GECO Plus mushrooms with minimum fragmentation and has excellent penetration even in heavy game or if striking bone. The breaking points visible on the jacket control the deformation and ensure the bullets effectiveness.

Construction GECO Plus bullet

For deep penetration with absolutely minimum carcass damage for deer or even larger game.

1. **GECO Performance Point:** For precision and safe deformation
2. **GECO Grooves:** For controlled effectiveness
3. **GECO Bonding:** For deep penetration and venison protection
