9.3 x 62

The 9.3 x 62 was developed around the year 1905 and to date is a popular calibre for hunting Central European large game, in particular moose, red deer and wild boar. Furthermore, this calibre is very popular for drive hunting.

The GECO loads with a bullet weight of 255 gr are optimally suitable for this type of hunting. The lead-free bullet GECO ZERO is available in a light load with a weight of 184 gr.

GECO Express

The GECO Express gives a flat trajectory, a high bullet velocity and a fast energy transfer – all combined in a unique new GECO design. The streamlined bullet shape combined with the new GECO Express Tip allows for extremely precise long distance shots without correction of the aiming point. The jacket design allows high bullet velocities which are maintained right to the target and give an extremely high energy yield resulting in clean kills.

Construction GECO Express bullet

Suitable for any hunting situation and reliable in effectiveness when long distance shots are required.

1. **GECO Express Tip:** For precision and flatness
2. **GECO BC-Shape:** For a low air resistance
3. **GECO Special Jacket:** For high knock-down power
