7 x 65 R

The 7 x 65 R was introduced as the rimmed version of the 7 x 64 in 1920. This calibre is predestined both for combination hunting rifles and break-open rifles – with this, the whole range of use from roe to red deer can be well covered.

Both with the 165 gr GECO Softpoint bullet and the 170 gr GECO Plus good external ballistic characteristics are being achieved. For everyone preferring lead-free ammunition or where classic hunting ammunition is prohibited by law, we offer the GECO ZERO with a weight of 127 gr.

GECO ZERO

GECO ZERO is GECO's newest development. It distinguishes itself with premium accuracy and outstanding stopping power – and is completely lead-free! This highly innovative jacketed bullet has two tin cores. Assisted by the hollow-point design, the pre-fragmented front core disintegrates instantly upon contact with the targeted animal and releases a large portion of its energy to quickly bring it down. Together with the jacket, the rear core remains a stable slug to penetrate and provide a certain exit wound. This makes GECO ZERO an excellent choice especially on light to medium game.

Construction GECO ZERO bullet

GECO ZERO: Lead-free bullet with great accuracy and terminal effect – for all game.

1. **GECO Performance Point:** for accuracy and certain expansion
2. **Pre-fragmented tin front core:** for reliable performance and solid stopping power
3. **Rear cannelure:** for high weight retention and a certain exit wound
