## .22 Hornet

### Origin of this calibre:

The calibre RWS .22 Hornet is ideal for fox and hare hunting, because it causes little damage to the game's meat and pelt. For this reason, it is often also used for hunting wood grouse or black grouse. The ideal shooting distance is slightly less than 100 m, as this small calibre is a little wind-sensitive. Because of its low recoil, the small calibre is very popular with female and male hunters.

When fired from modern rifles, the .22 Hornet shows excellent precision. Moreover, this calibre is perfectly suitable for barrel inserts in combination guns, because it does not stress the action that much. It often is the maximum calibre for barrel inserts that can be used in older drillings. For hunting, it is frequently used in precision repeating rifles.

**CAUTION: This cartridge is not recommended for the hunting use.**

## Hunting Match MJ

This bullet type is not suitable for the hunting use!

Generations of new hunters and competition shooters have relied on these cartridges in their hardest examination. With success.

The RWS MATCH JAGD-bullet gets the last bit of precision out of your rifle.

Due to its compliance with the hunting regulations (E 100 > 1.000 Joule), the RWS .222 Rem MJ 3.4 g is especially suitable for the training for the hunters' examination and the actual shooting examination.

### RWS Hunting Match MJ at a glance:

- ammunition for examination, not for hunting
- suitable for the training for the hunters' examination and the actual shooting examination
